

# SQUARE HEAD™

## CERAMIC FIRING POTS FOR METAL CLAY

DURABLE CERAMIC BODY · WIDE FIRING RANGE · THERMAL SHOCK RESISTANT  
CLEAN · LIGHTWEIGHT · SIZED TO FIT ANY KILN

Please follow all instructions for metal clay given by the manufacture. Bronze firing may have to be adjusted due to newer bronze clay being more sensitive to firing temperatures. It is strongly recommended that you fire a test piece before committing to a large batch of material as kiln temperatures can vary by up to 90°F (50°C) in either direction from the temperature set on the kiln temperature controller.

## **CAUTION**

Do not attempt to remove pot from hot kiln. Product will be extremely hot. Serious injury could result. Allow kiln to cool completely before removing pot.
